

oxygen travel tips

- If it is necessary to transport your oxygen, do not place it in the trunk of your car. You may transport oxygen in the back seat of your car if the oxygen cylinder is properly secured.
- When transporting oxygen in a car, you should open the car window by at least 1 inch.
- If you are transporting liquid oxygen, be sure it is in an upright position.
- Cylinders must **not** be carried by hand, over your shoulder, or cradled in your arms.
- The best option when there is not a cart available is to lay the cylinder next to a wall and come back later with a cart.
- If you will be traveling a long distance, please notify your Cook Children's Home Health representative at (682) 885-6294 or (800) 747-8242 so we can assist you in making arrangements to meet your oxygen needs on your trip.
