Community Health Needs Assessment Report
Tax Year 2018

Public comment on this report is encouraged and should be sent via email to:
CHNAFeedback@cookchildrens.org

Report prepared by the Child Health Evaluation team, Center for Children’s Health
For additional information contact: CCHAPS@cookchildrens.org

This report is provided in fulfillment of the Internal Revenue Service Section 501(r)(3)(A) requirements for Charitable Hospitals to conduct a Community Health Needs Assessment (CHNA). The 2018 Community Health Needs Assessment was approved by the Board of Trustees and is now posted for public comment.
Cook Children's Health Care System is one of the country's leading integrated pediatric health care systems. Based in Fort Worth, Texas, our not-for-profit organization includes a nationally recognized medical center, physician network, surgery center, home health company, health services company, health plan, and health foundation. For more than 100 years, Cook Children's has grown to become one of the largest and most recognized freestanding children's health care systems in the southwest with more than one million patient encounters each year. It offers top medical minds, advanced technological equipment, leading surgical techniques, rehabilitation services and ancillary services designed to meet the unique needs of children.

ACKNOWLEDGEMENTS

The Center for Children’s Health recognizes the many community partners and organizations who shared their insight and experience with us to help elevate this assessment process. Through gathering feedback from various community members, we believe this assessment represents the priorities, assets, and challenges of the families and children living in our six-county service region.

We extend a special thank you to the member organizations and individuals of the seven coalitions led by the Center for Children’s Health. Their feedback was not only helpful in this assessment process, but it will also be instrumental in improving future needs assessments.

- Children’s Oral Health Coalition
- Healthy Children Coalition for Parker County
- Hood County for Healthy Children
- Johnson County Alliance for Healthy Kids
- Safe Kids North Texas
- Wellness Alliance for Total Children’s Health
- Wise Coalition for Healthy Children

Our six-county service region is home to many organizations and individuals who are working diligently to improve the health of children through collaboration, innovation, and determination. It is an honor for Cook Children’s to be a partner with you in this endeavor.

Thank you to Cook Children’s System Planning and Health Care Analytics Department for providing system data. Thank you to ETC Institute for overseeing the survey administration and data collection for this needs assessment, and to MHMR Tarrant County for conducting parent surveys of the homeless population.

THANK YOU!
A MESSAGE TO OUR COMMUNITY

Dear valued community member,

Our work at Cook Children’s is grounded in our system’s promise: “Knowing that every child’s life is sacred, it is the Promise of Cook Children’s to improve the health of every child in our region through the prevention and treatment of illness, disease and injury.” Through this promise we strive to fulfill our commitment to families in making North Texas one of the healthiest places to raise a child. One way we do this is by offering community programs, coalitions, and research through the Center for Children’s Health.

Although Cook Children’s has always used health care data to drive community outreach services, we began conducting formal assessments in 2009. The Community-wide Children’s Health Assessment and Planning Survey (CCHAPS) is conducted every 3 years to identify the health needs of children in our six-county primary service region and determine or confirm community health outreach priorities for action.

Recognizing that children’s health issues are complex and successful implementation of solutions requires a collaborative effort among a broad range of organizations, the Center makes intentional efforts to share CCHAPS findings with the community. The Center develops strategies for addressing targeted children’s health priorities through research and an infrastructure that supports effective delivery of community and family services. Our services are data driven, evidence-informed and provided using high standards of community practice and service delivery.

We know our communities offer strong support to families and children. The unique perspective that community leaders and families provide during the CCHAPS data collection process plays a key role in helping us integrate all of this important information, and guides our efforts for addressing the identified health priorities. We sincerely appreciate the leadership provided by our community partners, and we look forward to continuing our work to improve the health of children in our region.

Sincerely,

Christian Pedigo, MHA, RN
Senior Vice President, Center for Children’s Health
In 2009, Cook Children’s began conducting formal community health needs assessments (CHNAs) every 3 years to identify the health needs of children in our six-county service region (Denton, Hood, Johnson, Parker, Tarrant, and Wise counties). To determine or confirm community health priorities for action, we established the Community-wide Children’s Health Assessment and Planning Survey (CCHAPS), reviewed publicly available data, and conducted focus groups with parents and children. Recognizing that children’s health issues are complex and successful solutions require a collaborative effort among a broad range of organizations, Cook Children’s engages multiple community partners in this effort to research, understand, communicate and address children’s health issues. Assessments were conducted and implementation strategies developed in 2009, 2012, 2015, and most recently in 2018.

Cook Children’s created the Center for Children’s Health in 2011 to provide an infrastructure for using children’s health assessment data to guide community programs and stakeholder collaborations that prevent illness, disease and injuries for children. The Center oversees a regular community health needs assessment, community research and community health outreach. All three categories of Center activities focus on increasing access to preventive services for underserved populations.

This report is a systematic analysis of the 2018 CCHAPS and secondary data from public health/academic sources to update stakeholders on children’s health priorities for the region. The assessment focuses on the child health issues previously prioritized by Cook Children’s Board of Trustees with an emphasis on community-level social determinants of health. The seven issues identified were access to health care, asthma, healthy lifestyles (obesity prevention), mental health, oral health, abuse & neglect prevention, and injury prevention.

Cook Children’s contracted with ETC Institute to conduct parent and community leader surveys and with MHMR Tarrant County to conduct interviews with homeless parents.

### CHNA Purpose

The triennial Community Health Needs Assessment (CHNA) is conducted to:

- Fulfill our promise to improve the health of every child in our primary service region
- Identify significant health needs of children living in our community
- Increase access to healthcare for children in need, with emphasis on underserved populations
- Prioritize health needs and resources potentially available to address them
- Support community stakeholders, programs, coalitions, partnerships, research, and policy
- Enhance community knowledge and capacity to prevent child illness, disease, and injury
- Assess roles of healthcare providers and organizations in improving community health
- Share findings with the public via Cook Children’s website, social media, and community presentations
- Satisfy IRS Notice 2011-52 addressing CHNA for charitable hospitals in section 501(r)(3)
Based on the 2009 initial assessment results, Cook Children’s Board of Trustees prioritized the children’s health issues identified by parents and community leaders on April 28, 2009 using group process techniques followed by a nominal voting exercise. Reviews of data findings from subsequent community health assessment processes in 2012, 2015 and 2018 confirmed the importance of these issues for continuing, focused intervention. Although progress in addressing these issues is consistent, the growing number of children and the overwhelming need outlined in this and earlier reports are evidence that continued focus on these issues is paramount. Cook Children’s Board of Trustees reviewed and approved these issues as continuing priorities on September 24, 2013, September 27, 2016, and December 3, 2019.

Shortly after the creation of the Center in 2011, five new regional coalitions formed in Denton, Hood, Johnson, Parker, and Wise counties, joining two established coalitions in Tarrant County. Coalitions are well documented in research as effective mechanisms for facilitating sustainable community change through community collaboration and focused efforts. Diverse membership in each coalition worked together to mutually agree upon an initial health focus, and group-facilitated decisions were made according to formal coalition bylaws and meeting guidelines. Subsequent strategies, partnerships, and programs evolved, and continue to be data-driven, evidence-informed and high quality.

Progress made by these coalitions since the last CHNA in 2015 are outlined in the Appendix. Assessment findings from CCHAPS 2018 and secondary data sources related to these children’s health issues are summarized following the CHNA Methodology and Community Definition sections.

**2018 CHNA METHODOLOGY**

To assess the status of the prioritized health issues and estimated number of children impacted, we collected survey data from a representative group of parents of children aged 0–14, homeless parents, and community leaders. Associated health and social risks were identified using public health and academic sources. The combined estimated number impacted and potential health risks were used to prioritize findings and form meaningful operational and evaluative strategies for community stakeholders.¹ Public comments were not incorporated into CHNA findings because none were received from Cook Children’s email address created specifically for that purpose (CHNAFeedback@cookchildrens.org), (sales promotions and business solicitations were the only correspondence received).

¹ Rosenbaum, S. (June 2013) *Principles to Consider for the Implementation of a Community Health Needs Assessment Process*. The George Washington University School of Public Health and Health Services, Department of Health Policy

**Community-wide Children’s Health Assessment and Planning Survey (CCHAPS)**

**Parent Survey** – ETC Institute administered a household survey by mail, internet, or phone to parents of children aged 0–14 in the service region, providing a representative assessment of parent perception, child health characteristics, and community health needs.

- **Survey Design**: A core set of questions assessed access to health care, asthma, healthy lifestyles (obesity prevention), mental health, oral health, abuse & neglect prevention, and injury prevention. Twenty questions from the National Survey of Children’s Health (Child and Adolescent Health Measurement Initiative) were included for national and state comparison data. To reduce survey length and increase response rate, two versions of the survey were administered. Both versions were offered in English and Spanish and required an average response time of 25 minutes.

- **Data Collection**: Data were collected between July 2017 and May 2018 by mail, phone or internet with a 33% response rate. Respondent demographics were monitored throughout the data collection process to ensure a representative sample according to gender, race/ethnicity, marital status, education, and household income.

- **Sample**: To collect a statistically representative sample from parents of children aged 0–14 at the county and regional levels, 25,000 surveys were mailed (12,500 of Version 1 and 12,500 of Version 2). Of the 8,249 completed surveys, 41% were completed by mail and 59% were completed by internet or phone. A stratified sample ensured that results are statistically valid for each county.

- **Reliability**: Findings are representative of families with at least one child aged 0-14 at the regional and county levels. The large survey sample (8,249) provided a low margin of error (+/- 1.5%) at the 95% level of confidence.

- **Limitations**: Parent perception and knowledge may influence results. Findings are descriptive, not causal.

**Homeless Parent Survey** – MHMR Tarrant County administered the household survey through face-to-face interviews with a total of 209 parents of children aged 0–14 residing in Tarrant, Hood, and Johnson counties. One-
half of the interviews were conducted using Version 1 of the survey and one-half were conducted using Version 2. Interviews were conducted from October 2017 through June 2018 at Tarrant County homeless shelters and government or social service locations in Hood and Johnson counties. Respondents received a $25 incentive.

**Limitations:** Due to challenges inherent in counting the homeless population, it is difficult to assess the sample size required to be representative. In addition, interviews were conducted at organizations providing services and/or shelter to the participants and therefore findings may not be representative of homeless parents who are not receiving services or homeless parents residing outside these organizations’ service regions.

**Community Leader Survey** – ETC Institute also administered an email survey to community leaders to obtain input regarding children’s health issues from their perspective. The survey included general questions about children’s health priorities and questions designed to assess the impact of Adverse Childhood Experiences (ACES) in their communities. The mailing list included 1,155 representatives from city/county governments, county public health departments, agencies, non-profit organizations, schools, faith based/clergy, and health care/public health professionals. A total of 301 responses were received for a 26% response rate. Of those responses, 25% identified themselves as non-profit organization leaders, 18% were medical/dental/mental health professionals, 18% were educator/school official, 19% were elected officials, 12% were government official/public health, and 32% represented other types of organizations.

**Limitations:** The sample is representative of community leaders at the regional level according to how we defined “community leader” (elected officials; school superintendents; presidents or executive directors of health, nonprofit or business organizations; public health officials; selected clergy; and other neighborhood leaders). However, findings may not be representative of community leaders at each county level. In addition, findings represent respondents’ perceptions and opinions of children’s health issues.

**Secondary Data - Public Health & Academic Sources**

As a supplement to findings from parent and community leader surveys, secondary data from national, state, local public health, schools, and academic sources provide a deeper understanding of complex social, economic, and environmental factors that influence child health outcomes at the individual and community level.

Individual behaviors and access to quality health care may improve health outcomes; however, socioeconomic factors, such as education, employment, income, family support, and community safety, greatly influence health outcomes and require effective community collaboration for successful improvement efforts.¹

The University of Wisconsin Population Health Institute and the Robert Wood Johnson Foundation developed the County Health Ranking Model shown below to illustrate the various factors that influence health outcomes. This work is based on a commitment to health equity, the concept that everyone

has a fair and just opportunity to be as healthy as possible, regardless of demographic or geographic factors. Although many of this model’s indicators are based on adult populations, it does provide a valuable framework for considering the socioeconomic influences, health behaviors, clinical care, and physical environment factors that play an important role in children’s health. It is important to note that physical environment (10%) and social and economic factors (40%) comprise half of the factors that contribute to health outcomes. This is critical information to remember as we review the findings in this assessment and contemplate community action steps.

Figure 1. Factors that influence health outcomes

Figure 1 Source: County Health Rankings & Roadmaps, Robert Wood Johnson Foundation
COMMUNITY DEFINITION & POPULATION SERVED

The Cook Children’s six-county service region is based in North Central Texas and comprises Tarrant, Denton, Johnson, Parker, Wise, and Hood Counties. The U.S. Census Bureau classifies these counties as follows: Tarrant County (mostly urban, 1% rural), Denton County (mostly urban, 7% rural), Johnson County (mostly urban, 38% rural), Parker County (rural 56%), Wise County (mostly rural 72%), and Hood County (mostly urban, 33% rural).¹

The region is home to a diverse population of 3,382,569 people and 720,697 (21%) are children under 14 years of age. The annual median income for families with children under age 18 ranges between $63,702 in Wise County to $99,763 in Denton County.² Of the 834,108 children under age 18 living in the region, 151,931 (16%) live in households with income below poverty level; and between 28.9%-52.5% of those living in poverty reside in female householder, no husband present households. Of the 834,108 children under age 18 living in the region, between 13%-38% live in households that receive Supplemental Security Income (SSI), cash public assistance, or Food Stamps/SNAP benefits.²

¹US Census Bureau 2010, Geography, Urban and Rural Classification
²US Census Bureau 2010 Demographic Profile, 2013-2017 American Community Survey 5-Year Estimates

Cook Children’s six-county service region is home to:

720,697
Children under 14 years of age

The number of children specific to each county is noted on the map.

Source: US Census Bureau 2010, 2018 Annual Estimates of Resident Population for Selected Age Groups for the United States
The Cook Children’s service region provides 79.5% of the inpatient admissions to our medical facilities and the remaining 20.5% comes from counties outside of the Dallas-Fort Worth Metroplex, comprising a geographic referral area of approximately one-half of the state.

**Medically underserved, low income and minority populations**

The Cook Children’s six-county service region contains four medically underserved areas and one medically underserved population as defined by the Health Resources & Services Administration. These areas are:

<table>

*Represents the Index of Medical Underservice (IMU) score. The lowest score (highest need) is 0; the highest score (lowest need) is 100. In order to qualify for designation, the IMU score must be less than or equal to 62.0, except for a Governor designation, which does not receive an IMU score.

Cook Children’s provided 336,229 visits at our Medical Center and 206,621 visits and Urgent Care Centers in medically underserved and low-income communities during FY2016-FY2018. Medicaid patients represent 99% of visits at Neighborhood Clinics and more than 80% at Urgent Care Centers.

**Access to Care for Medically Underserved and Low Income Communities**

*Source: Cook Children’s Health Care System, Healthcare Analytics*
To assess the needs of children in medically underserved and low income communities, Cook Children’s CHNA methodology included ensuring that families from income levels representative of families in the service region were included in the parent survey (see comparison below). We also administered the survey to homeless parents at Tarrant County homeless shelters and government or social service locations in Hood and Johnson counties through face-to-face interviews. A total of 209 parents of children aged 0–14 residing in Tarrant, Hood, and Johnson counties participated.

*US Census Bureau 2010 Demographic Profile, 2013-2017 American Community Survey 5-Year Estimates; complete data distribution by county included in previous section.

Questions related to access to care were included on the CHNA parent survey, including the health insurance status of children, awareness about resources, and whether children received all the medical and dental care needed. Summary data findings for these questions are include in the 2018 CHNA Findings section on Wellness: Access.
The Federal Child Abuse Prevention and Treatment Act (CAPTA) defines child abuse as “any recent act or failure to act on the part of a parent or caretaker which results in death, serious physical or emotional harm, sexual abuse or exploitation." It also includes, "an act or failure to act which presents an imminent risk of serious harm" to a child.

Adverse childhood experiences (ACEs) can have an important impact on a child's health. Research findings across all demographics show that children who live with ACEs—such as domestic violence, child abuse and neglect, parental incarceration, or caregivers with mental illness or addiction—suffer lower rates of school success and adult accomplishments, and much higher rates of chronic health conditions and lower life expectancy.

What did we find?

According to the Texas Department of Family and Protective Services FY2018 Data, 8,686 children aged 0–17 were confirmed victims of child abuse and neglect in the 6-county service region. Given the population variances between counties, the abuse rate per 1,000 children is the preferred comparison metric between county and state data.1

<table>
<thead>
<tr>
<th></th>
<th>Abuse/Neglect Rate per 1,000 children</th>

<td>1,337</td>
</tr>
<tr>
<td>Texas</td>
<td>8.75</td>
<td>66,362</td>
</tr>
</tbody>
</table>

At the national level, 65.7% of reports of alleged child abuse and neglect came from professionals (teachers, police officers, lawyers, social services) and 17.3% of non-professionals (friends, neighbors, and relatives).2 Similarly to the U.S., Texas data shows 65% of reports were from professionals and 19% were from non-professionals.1

After abuse or neglect is reported, investigators decide if a threat is present. If the child is unsafe, investigators may offer resources, referrals, or take court action to protect a victim.3 The rates included in the above table reflect confirmed cases of abuse/neglect. There were 23,703 unconfirmed victims within the Cook Children’s six-county service region in FY2018.1

---

1 Texas Department of Family and Protective Services 2018 Data Book
https://www.dfps.state.tx.us/About_DFPS/Data_Book/default.asp

In FY2018, there were over 36,803 children in Texas aged 0–5 who were confirmed victims of abuse; over 5,000 (14%) of those children lived in the Cook Children’s 6-county service region. Children less than one year of age represented the largest age group of confirmed victims.

Hood County had a considerably higher confirmed victim rate per 1,000 children compared to other counties in the region. Hood County also has strong community support for reporting and confirming child abuse, which may explain this higher rate.

Forms of abuse include physical, sexual, emotional/psychological, and neglect, which is defined as the failure of a caregiver to protect a child from harm and provide basic needs.

Young children (under the age of four) or children with special healthcare needs are at an increased risk for child abuse. Additionally, a parent’s inability to understand a child’s needs or development and an absence of social support are risk factors for perpetration.4

At the national level, the greatest percentages of children suffered from neglect (74.9%) and physical abuse (18.3%).5 In Tarrant County, 78% of abuse/neglect perpetrators were parents, 15% were non-parent relatives, and 7% were a parent’s significant other.6 At the national, state, regional, and county level, children in the first year of life have the highest rate of victimization, followed by young children in aged 0–5.5,7

---

6 Tarrant County Public Health, Data Brief Abuse and Neglect. April 2019

7 Texas Department of Family Protective Services. Child Protective Investigation
What did our community leaders say?
Community leaders ranked **child abuse** (29%) or **mental health** (28%) as the most important child health issues. Other response options for the most important issues included primary care, nutrition, emergency care, immunizations, childhood obesity, dental care, health services and fitness opportunities (respectively represented in Chart 1 below). **Over half** of the leaders reported they do **not** agree that a child is safe from abuse in their county (Chart 2). In addition, **more than half** of leaders listed ACEs as a “very serious” or “serious” problem, with the highest concern being “Children in my county living with anyone who has a problem with alcohol or drugs.”

**Source**: Cook Children’s Community-wide Children’s Health Assessment & Planning Survey, 2018 Community Leader Survey

**Note**: Community leaders were asked to rate their level of agreement with the statement: ‘Children are safe from child abuse in my county.’
Why is this important?

Five counties in the Cook Children’s service region have higher rates of confirmed victims of abuse and neglect than statewide. The majority of child abuse and neglect reports come from professionals. Children less than one year of age represent approximately one-third of the children abused or neglected in the service region, and neglect is the highest form of abuse.

Based on decades of research focused on adverse childhood experiences (ACEs), the impact of child abuse and neglect is detrimental and can last a lifetime. Prevention is important because child abuse and neglect is avoidable. Prevention efforts may involve various systems in our community to help keep children safe, such as comprehensive health care services, law enforcement, judicial and public social services, and nonprofit agencies.

Fortunately, community leaders in the service region recognize the importance of this issue, rating child abuse and mental health as the most important child health issues and expressing sincere concern about the safety of our children. The Texas Department of Family and Protective Services website maintains a prevention program locator by county. These resources and support from community leadership provide valuable opportunities for collaboration around reducing the risk of abuse for our children.
Tooth decay is one of the most common chronic diseases during childhood. The Surgeon General and the American Academy of Pediatrics report that children with untreated tooth decay often suffer from persistent pain, an inability to eat comfortably or chew well, embarrassment at discolored and damaged teeth, and distraction from play and learning.\textsuperscript{1,2} Thankfully, tooth decay is preventable. However, there are social factors that influence a child’s oral health, including access to care, family behaviors, and oral health inequalities.

**What did we find?**

The Centers for Disease Control and Prevention (CDC) report that more than one-third of children (37\%) aged 2–8 have experienced dental caries (tooth decay) in their primary teeth, and 58\% of adolescents aged 12–19 have experienced dental caries in their permanent teeth.\textsuperscript{3} The CDC also reports that 14\% of children aged 2–8 and 15\% of adolescents aged 12–19 have untreated tooth decay.\textsuperscript{3}

Poor dental health in childhood can escalate into far more serious problems later in life. There is a disproportionate share of untreated tooth decay in low-income children.\textsuperscript{4} Children aged 5–19 years from low-income families are twice as likely to have dental decay in comparison with their more affluent peers.\textsuperscript{5} Treatment for underserved children frequently occurs in the emergency room or on an outpatient surgery basis which could be avoided with preventive care.\textsuperscript{3} The Center for Children’s Health Save a Smile program annually screens Pre-K through 6th grade children from 18 low-income Tarrant County schools to assess the need for dental treatment. Of the 7,915 children available for screening in the 2018-2019 school year, 383 (4.8\%) were classified as having severe dental disease on the day of the screening and 1,125 (14.2\%) were classified as needing dental treatment.

What did our CCHAPS families say?

CCHAPS 2018 data reveal that 16% or 115,268 children aged 0–14 in our service region did not have a dental exam in the previous 12 months. In addition, 13% of children aged 0–14 in the region, or 93,655 children, did not receive all the dental care they needed.

In addition to cost and access barriers, parents reported they “did not think their child was old enough” as a reason for not receiving all necessary dental care. When asked what age their child should visit the dentist, almost half of the parents in the region did not know the correct age.

A considerable body of research shows an important relationship between oral health and overall health. Yet CCHAPS 2018 data reveal that more than half of parents in our 6-county service region reported that their child’s oral health does not at all impact their overall health; and almost 10% did not know. This is a huge disconnect for families and this is an opportunity to make a difference in children’s overall health.

### Chart 1. Parent Survey, age child should visit the dentist

Parents who noted the correct age of 1 year: 54%
Parents who noted one of the incorrect responses, including do not know: 46%

**Source:** Cook Children’s Community-wide Children’s Health Assessment & Planning Survey, 2018 Parent Survey

**Note:** The other response options were 2 years, 3 years, when permanent teeth come in, and do not know.

### Chart 2. Parent Survey, amount child’s dental health affects his/her overall health

- A lot: 10%
- Some: 11%
- Very little: 13%
- Not at all: 57%
- Don’t know: 9%

**Source:** Cook Children’s Community-wide Children’s Health Assessment & Planning Survey, 2018 Parent Survey

**Note:** Question: ‘How much does this child’s dental health affect his/her overall health?’
Why is this important?

Social factors can significantly influence a child’s oral health, such as access to care, family behaviors, and oral health inequalities. Social services, such as appointment coordination, transportation, and translation have a considerable effect on a family’s access to dental care. Many parents in the six-county service region do not think their child was old enough to receive preventative dental care, and many parents do not believe oral health was important to the overall health of their child. These perceptions contradict recommendations by the American Academy of Pediatrics stating that the first visit to the dentist should occur by the child’s first birthday and that oral health is connected to general health. This suggests parent awareness is an important factor to address in the six-county service region.
Caused by genetic and environmental factors, asthma is a chronic disorder characterized by episodes of reversible breathing problems. Over the course of a lifetime, asthma can cause permanent lung damage. When asthma symptoms become severe, an asthma attack can occur. The Centers for Disease Control and Prevention (CDC) report that during 2016 more than half of all children with asthma had at least one asthma attack.\(^1\) There are preventable measures to help lessen the frequency and severity of asthma attacks.

**What did we find?**

About six million children in the United States aged 0–17 have asthma.\(^1\) While asthma affects people of every race, sex, and age, disparities exist in low-income and minority populations (children, African Americans, people living below poverty level).\(^2\) Nationally, about 16% of African American children and 7% of Caucasian children have asthma.\(^1\)

In the United States about 6 million children, or 1 in 12, aged 0–17 years have asthma.\(^1\)

In 2008, an estimated 590,563 children in Texas had asthma. Child lifetime asthma prevalence was 14.1% and child current asthma prevalence was 9.2%.\(^3\) Asthma was the underlying cause of death for 16 children in Texas, and the age-adjusted asthma mortality rate in Texas was 9.7/million compared to 11.0/million nationwide.\(^4\) Asthma is also the most frequent primary diagnosis for inpatient and emergency room visits to Cook Children’s regardless of the season.\(^5\)

Uncontrolled asthma can have serious consequences on a child’s ability to play, learn, and sleep.\(^6\) Managing a child’s asthma takes an interdisciplinary approach. Healthcare providers, families, schools, health insurance plans, government entities and social service organizations all play a role in keeping a child’s asthma under control.

\(^5\) Cook Children’s Medical Center, Trauma Center, Physician Network, Case Management Services, Meditech Data Repository, and Epic Data Repository
What did our CCHAPS families say?

From the CCHAPS 2018 survey, parents report that 14% of children aged 0–14 in the six-county service region were diagnosed with asthma at some point in their life.

Of these estimated 100,859 children, 65% currently have asthma, with higher prevalence among African American and Hispanic children. Of the children with current asthma, nearly 15,000 (15%) have been to the emergency room in the past year because of asthma symptoms. Boys (55%) are more likely to currently have asthma than girls (45%). Children aged 6–10 account for 42% of those children with current asthma.

Of those children that currently have asthma, parents report that:

- 19% do not have an asthma action plan
- 31% have asthma symptoms or use inhaler more than 2 times per week
- 12% wake during the night with asthma symptoms more than twice a month
- 35% refill inhaler more than 2 times per year

**Source:** Cook Children’s Community-wide Children’s Health Assessment & Planning Survey, 2018 Parent Survey

Why is this important?

In the six-county service region about 100,859 (14%) of children aged 0-14 have asthma. Asthma prevalence is most common among African American and Hispanic children within the region. Of the children with asthma, almost 1 in 5 do not have an asthma action plan, as reported by parents. Asthma action plans are personalized tools to help individuals control their asthma and prevent attacks. Communicating the importance of an asthma action plan and how to use it is key to helping a family use the plan regularly as a tool to help control their child’s asthma.

Nearly 1 in 3 children with current asthma have symptoms or use their inhaler more than twice a week. Asthma symptoms can occur when a child is exposed to asthma triggers. An asthma trigger is something that makes a child’s asthma symptoms worse or cause an asthma attack. There can be social factors connected to a child’s asthma triggers making it difficult for families to completely avoid these triggers without social support to change their home environment.

The CDC advocates for communities to work together to help families manage a child’s asthma. There are specific initiatives and activities that everyone can do to help children with asthma manage their symptoms and avoid asthma triggers that can lead to an asthma attack. Healthcare providers provide asthma action plans, educate families on the importance of medication use, and help families identify a child’s asthma triggers. Schools also work with families to use the asthma action plan and maintain communication with school personnel. Education is important for asthma prevention. Social service providers can provide products and services to reduce the occurrence of triggers in the home environment. For more information on how to provide community support for children and families regarding asthma, visit [https://www.cdc.gov/vitalsigns/pdf/2018-02-vitalsigns.pdf](https://www.cdc.gov/vitalsigns/pdf/2018-02-vitalsigns.pdf).
2018 CHNA FINDINGS

WELLNESS: MENTAL HEALTH
Mental health is an important aspect of maintaining a child’s overall physical health and development. Mental disorders, such as attention-deficit/hyperactivity disorder (ADHD) or anxiety, may impact how children learn, behave, handle their emotions, and engage in risk behaviors. Anxiety and depression may appear differently in children in comparison to adults. Some children may keep worries or sadness to themselves, making it more difficult to recognize the symptoms for anxiety and depression. Some children portray anxiety as fear or worry, but others may express it with irritability or anger. Symptoms of anxiety may also include trouble with sleeping or physical symptoms such as headaches or stomach-aches. Depression in children may cause behaviors that appear to others as a lack of motivation or causing trouble. Severe depression may lead a child to contemplate suicide.

What did we find?

The Centers for Disease Control and Prevention (CDC) report that nationally, 7% of children aged 3–17 have diagnosed anxiety, which is approximately 4.4 million children. There are 3% of children, an estimated 1.9 million, in the United States aged 3–17 that have diagnosed depression.

The CDC also reports 34% of Texas high school students (Grades 9th–12th) have depression symptoms, compared to 31% in the United States. Moreover, 34% of students (Grades 9th–12th) in Texas reported that they felt sad or hopeless almost every day for two weeks or more in a row so that they stopped doing some usual activities.

Although diagnoses of depression and anxiety increase with the child’s age, behavior issues are more common in children, aged 6–11. Mental health concerns begin early in childhood. According to the CDC, 17% of children, aged 2–8, in the United States have a diagnosed mental, behavioral, or developmental disorder, affecting more boys than girls. The National Alliance on Mental Illness states that half of all chronic mental illness begins by age 14.

Children’s mental health connects to family, community, and health care factors. Cost, insurance coverage, and awareness may cause access barriers for children needing care for mental health. It is important to learn about anxiety and depression in children, and to speak with children about managing stress and emotions.

What did our CCHAPS families say?

For children aged 0–14 living in the six-county service region, CCHAPS data show that 57,634 (8%) are diagnosed with a mental illness or disorder. Of those diagnosed, 63% reported that they could not easily access mental health services for their child. An estimated 14,800 children needed mental health care but did not receive it. Additionally, only 28% of parents of children aged 0–14 reported they are familiar with mental health services in their community.

Top reasons parents reported child (aged 0–14) did not receive mental healthcare

Source: Cook Children’s Community-wide Children’s Health Assessment & Planning Survey, 2018 Parent Survey

Why is this important?

The CDC data show that mental health is an issue for a considerable number of children in the United States and CCHAPS data for the past four survey periods highlights many concerns of local parents regarding children’s mental health. In addition to cost, insurance coverage, and awareness, children seeking mental health services may face delayed or limited access to providers that accept Medicaid/CHIP. Reducing the stigma of mental health and increasing awareness of mental health services are also important for helping families recognize and manage mental health issues. It is important to understand the complexity of addressing mental health issues for children and the need for collaboration across multiple community sectors in order to find innovative and effective solutions that improve access to mental health care.
2018 CHNA FINDINGS

WELLNESS: HEALTHY LIFESTYLES
A healthy lifestyle supports physical health, psychological health, and academic performance and without proper nutrition and physical activity, a child is at increased risk for obesity. According to the Centers for Disease Control and Prevention (CDC), childhood obesity occurs when a child is well above the normal or healthy weight for his or her age and height. Excess weight gain in children is often similar to weight gain in adults as complex issues are involved such as individual behavior choices, genetics and environmental factors. The stigma of a child’s weight can pose many consequences influencing their psychological and physical health, including an increase in being bullied, a vulnerability to depression, anxiety and substance abuse, as well as social isolation and adverse academic outcomes.¹

What did we find?

Research shows that childhood obesity is a severe concern affecting more than 13 million children in the United States, aged 2–19 years, at a rate of 18.5%.² The prevalence of obesity increases with the child’s age. The CDC found that obesity was present in nearly 14% of children aged 2–5 years, in 18% among children aged 6–11 years, and in 20% of children 12–19 years.² Disparities exist with childhood obesity among racial minority populations. The rate of obesity was higher among Hispanic children (26%) and non-Hispanic black children (22%) in comparison with non-Hispanic white children (14%).³ Data from the CDC also support that the prevalence of obesity decreased as the head of household’s education level increased, thus connecting childhood obesity with parent or caregiver education level.³

Statewide, the CDC reports that 18% of Texas high school students (Grades 9th–12th) in 2017 had obesity with a BMI greater than or equal to the 95th percentile. Additionally, 36% of high school students (Grades 9th–12th) in Texas described themselves as slightly or very overweight and 57% were not meeting daily physical activity guidelines of 60 minutes or more.⁴

Childhood obesity is related to anxiety and depression, low self-esteem, and social problems such as bullying and stigma.¹,⁵

Childhood obesity is a complex health issue. Environment and community play an essential role in a family’s ability to make healthy lifestyle choices. Childcare centers, schools, and other community locations can impact a child’s diet and physical activity through things such as, education regarding healthy lifestyles, food options, and opportunities for exercise or outdoor play. Other community factors that affect healthy lifestyle choices include the availability and affordability of fresh food options, peer and social support systems, marketing and promotion, and policies that determine how a community is designed.⁵

The evidence-informed 5210 healthy choices campaign models proper nutrition and physical activity behaviors supported by the American Academy of Pediatrics, U.S. Department of Health and Human Services, and National Association for Sport and Physical Education. The 5210 daily components are: 5 servings of fruits/vegetables, 2 hours or less of entertainment screen time, 1 hour or more of physical activity, and 0 sugary drinks.

What did our CCHAPS families say?

Using the 5210 framework, CCHAPS data show that of children aged 5–14 within the six-county region, nearly 60% are consuming only 2 or more servings of fruits/vegetables, 9% have less than 2 hours of entertainment screen time (video game play on TV, phone, or tablet), 30% are physically active for at least 30 minutes daily, and 49% don’t consume sugary drinks (soda). The table below provides a breakdown of these data by individual county. The counties are mostly comparable within each question. Parents reporting that their child has had at least 30 minutes of physical activity is the highest in Wise at almost 50% and the lowest in Hood at 20%.

### Healthy lifestyle behaviors of school-aged children (aged 5–14)

<table>

</table>

Other factors related to healthy lifestyle behaviors for children aged 5–14 across the region:

- **11%** of parents are concerned their child is overweight.
- **81%** of parents report their child eats healthy meals most of the time.
- **65%** of parents report they have family meals on 5 or more days a week.
- **73%** of parents report they talk about healthy eating habits daily or weekly with their child.

**Source:** Cook Children’s Community-wide Children’s Health Assessment & Planning Survey, 2018 Parent Survey

Why is this important?

Although the CDC reports that between 14% and 20% of children in the United States are obese, the CCHAPS data indicate that only 11% of parents are concerned their child is overweight. However, most families across the region talk to their children about healthy eating habits and have regular family meals, creating an opportunity to promote 5210 behaviors that may reduce the risk of obesity in childhood or later in life. In addition, screen time is a stronger factor than physical activity in predicting weight status in both children and adolescents, indicating the importance of limiting screen time to support healthy family lifestyles.

---

2018 CHNA FINDINGS

WELLNESS: PARENTING SUPPORT
The Centers for Disease Control & Prevention (CDC) report that risk factors for child abuse and neglect include the social isolation of families and parents’ lack of understanding about children’s needs, child development and parenting skills. The CDC also reports that protective factors for families include a supportive family network, support for basic needs, nurturing parenting skills, and communities that support parents and take ownership in preventing abuse.¹

**What did we find?**

As mentioned earlier in this report regarding child abuse and neglect prevention, abuse and neglect during childhood can have harmful effects that last a lifetime. The ultimate goal in child abuse and neglect prevention is working to prevent it from happening in the first place. The issues surrounding child abuse and neglect are complex, often stemming from unhealthy relationships and environments.²

Supporting parenting skills and family relationship approaches can provide parents and caregivers with support while encouraging positive parenting skills, and teaching child development and behavior management.³,⁴ These parenting skills have the potential to protect children from family violence and the long-term consequences that violence can bring.³,⁴

**What did our CCHAPS families say?**

CCHAPS data shows 65% of parents of children aged 0–5 and 60% of parents of children aged 6–14 are coping very well with daily parenthood demands. This would indicate 35% of parents of young children and 40% of older children could benefit from parenting resources or support in the six-county service region. In Hood County, parents of children aged 6–14 indicate they are coping better than parents of children aged 0–5. In Wise County, only 74% of parents with children (0–5) report they have someone for day-to-day emotional help and support with parenting, which is quite lower than the rate reported in the other counties within the region.

The table below shows how many parents responded that they discuss various topics with their children *daily or weekly*. These topics may be of interest especially to parents of older children within the region. Additionally, frequent discussions between parent and child may potentially increase a child’s resiliency and avoidance of risk behaviors.

**Parent discussions that occur daily/weekly with their children (aged 6–14)**

*Source: Cook Children’s Community-wide Children’s Health Assessment & Planning Survey, 2018 Parent Survey*

Many community sectors can support parenting skills and family relationships through choosing to develop or adjust approaches within current programming or initiatives. The CDC reports a community factor that protects children from abuse and neglect involves communities that *support parents*. The CDC’s Technical Package for Preventing Abuse and Neglect highlights different strategies for communities to prevent child abuse and neglect: [https://www.cdc.gov/violenceprevention/pdf/CAN-Prevention-Technical-Package.pdf](https://www.cdc.gov/violenceprevention/pdf/CAN-Prevention-Technical-Package.pdf)
Why is this important?

Although a majority of parents in the six-county service region report that they are coping well with the demands of daily parenthood, more than one-third also report that they could benefit from parenting resources or support. Of those parents reporting that they have someone for day-to-day emotional health and support with parenting, 12% of parents of younger children and 15% of parents of children aged 6–14 do NOT have regular support. Based on the CDC’s recommendation to protect children from abuse and neglect through communities that support parents, collaborative efforts will continue to play an important role in increasing parent support networks.
2018 CHNA FINDINGS

WELLNESS: ACCESS
Preventive services such as screening tests, vaccinations, counseling, early disease detection, information, and medication are cost-effective and cost-saving services that reduce death and disability.\(^1\) Children who are not able to receive all needed medical care are at increased risk for unfavorable health outcomes.

### What did we find?

Cost, insurance coverage, and health care awareness may cause access barriers for children needing health care. For the first time in a decade, the number of uninsured children in the United States increased in 2017.\(^2\) Over 275,000 U.S. children became uninsured, including 83,000 in Texas.\(^2\) In 2018, the number of children enrolled in Medicaid and CHIP decreased by about 840,000 nationwide, which includes 145,781 in Texas.\(^2\)

In the chart below, the ratio of the population to primary care providers represents the number of individuals served by one primary care provider (if the entire county population is distributed equally across all practicing providers). Ideally, the ratio should be small. While some of the providers below may not see pediatric and/or Medicaid/CHIP patients, we see the lowest ratios in Tarrant and Denton (mostly urban) with highest ratios in Wise, Parker, Johnson, and Hood counties (mostly rural).

---

\(^1\) National Preventive Council, National Prevention Strategy: Clinical and Community Preventive Services

What did our CCHAPS families say?

All four CCHAPS assessments have consistently shown that families struggling with homelessness have significantly less access to care than other families. CCHAPS data also show that families whose children are not up to date on immunizations have more difficulty accessing preventive health care and the overall health of their children is less likely to be rated as excellent or very good.

CCHAPS 2018 data show that 10% of children in the six-county service region (an estimated 72,043 children) were without healthcare coverage at some point during the previous 12-month period. Of the parents surveyed in the homeless shelters, 25% of children were without healthcare coverage at some time in the past 12 months leading up to the survey. Parents also reported that 4% of children in the six-county service region (approximately 28,817 children) did not receive all of the medical care that they needed. Thirteen percent of homeless children did not receive all needed medical care and 19% did not receive all of the medication that they were prescribed.

The top 2 reasons parents noted that their children did not receive medical care:

- Could not afford
- Not covered by insurance

Source: Cook Children’s Community-wide Children’s Health Assessment & Planning Survey, 2018 Parent Survey

In regard to immunizations, CCHAPS 2018 data indicate that 96% of parents say their child’s vaccinations are up-to-date for his/her age; Wise and Parker County parents reported slightly lower rates with 91% and 94%, respectively. Additionally, 89% of parents say they have “very easy” or “easy” access to vaccinations for their child; Wise and Johnson County parents reported slightly lower rates with 81% in each county.

Why is this important?

Recent data show that children’s health coverage is declining.² Children with Medicaid coverage miss less school, perform better in school, graduate and attend college, and become healthier adults.² Patients with a primary care provider have greater trust in their provider, communicate better with their provider, and are more likely to receive appropriate care.³ Access to health care is essential in a child’s life. The American Academy of Pediatrics recommends core principles related to access: (a) quality health care is a right; (b) every child should have quality health insurance and receive care in a medical home; and (c) children should have access to pediatric specialists, including mental and dental professionals. Many organizations are working on advocacy initiatives to ensure children have access to high-quality, affordable health care. Communities should join existing opportunities at the local, state, and national level to improve access to care for children. To learn about these opportunities visit the website of Texas Department of State Health Services or the American Academy of Pediatrics.

2018 CHNA FINDINGS

INJURY PREVENTION
Injury prevention focuses on preventing harm or death to children due to accidental or unintentional injury. Unintentional injuries can be prevented. Although injury prevention encompasses a variety of topics, this CHNA focuses on child passenger safety, drowning prevention, poison prevention, and gun safety.

What did we find?

According to the Centers for Disease Control and Prevention (CDC), unintentional injuries are the number one cause of death and disability among children aged 1 to 14.\(^1\)\(^3\)

**Child Passenger Safety**

In FY 2018, Cook Children’s admitted 1,471 children as a result of trauma, including 111 admissions related to motor vehicle crashes.\(^4\) Of the trauma admissions, twenty-one children died as a result of preventable injuries.

**Drowning Prevention**

Unintentional drowning is a leading cause of death for children 1–4 years of age and the second leading cause of death for children aged 5–9.\(^3\) Cook Children’s treated 95 children for unintentional drowning in FY18, and 13 of those drownings were fatal.\(^4\)

**Poison Prevention**

The CDC states that every day, over 300 children in the United States aged 0–19 are treated in an emergency department as a result of being poisoned, and for two children the results are fatal.\(^5\) These poisonings occur from various items such as household cleaners, as well as medications in the home. Most often poisonings with children occur due to medication dosing errors or unsupervised ingestion.

**Gun Safety**

Recent studies reveal that approximately 1,300 children aged 1-17 years die from gunshot injuries each year in the United States, and 5,800 receive treatment for nonfatal gunshot injuries.\(^6\) A child playing with a gun is the most common cause of firearm injuries and deaths among children, and most injuries and deaths occur in a child’s home.\(^6\)

**Safe Baby Sleep**

Infant mortality is a key indicator of health. In 2017, the five leading causes of infant mortality were birth defects, preterm birth, pregnancy complications, and sudden unexpected infant death.\(^7\) Sudden unexpected infant deaths (SUID) occur among infants less than one year old and have no immediately obvious cause.\(^7\) The three commonly reported types of SUID include sudden infant death (SIDS) and accidental suffocation/strangulation in bed.\(^7\)

Of the 3,600 sudden unexpected infant deaths in the United States (2017), about 1,400 deaths (38%) were due to SIDS and 900 deaths (25%) were due to accidental suffocation and strangulation in bed.\(^7\)

In Texas, the leading cause of death for infants younger than one year is congenital malformation; however, among infants older than 28 days, Sudden Infant Death Syndrome (SIDS) was the leading cause of death in 2016 and 2017.\(^6\)

In the CCHAPS region, a total of 236 infant deaths were reported in 2015; the infant death rate was highest in Hood County (7.4, 5 deaths), followed by Tarrant County (6.2, 175 deaths).\(^9\)
All across America, children are suffering from unintentional injuries at alarming rates. Community partners, advocacy groups, physicians and many others are working together to end unintentional injuries but it is a difficult challenge. Education, providing safety devices, and advocating for better laws are effective methods to help reduce the number of injuries and deaths seen each year.

What did our CCHAPS families say?

According to the 2018 CCHAPS data, 31,233 (11%) children aged 0–5 had an accidental injury that needed medical attention within the six-county region. The number of children aged 6–14 who had an accidental injury that needed medical attention within the six-county service region was 56,742 (13%). Hood county had the highest percentage of children aged 0–5 with a reported accidental injury at 14%, while Wise and Johnson counties had the highest percentage of children reporting accidental injury aged 6–14 at 15%.

CCHAPS 2018 data in the table below demonstrate that most parents of young and older children believe their child is properly buckled up in their vehicle; however, 8 out of 10 children visiting our Safe Kids North Texas fitting stations are not fitted in car seats properly. Wise County had the lowest percentage of parents reporting their child aged 0–5 was buckled-up properly at 81%.

CCHAPS 2018 data show that within the six-county service region, 30% of parents of children 0–5 years of age reported they either did not know or did not store medications in locked containers at home. This presents a potential poisoning risk for children.

Parents store medications in locked container or cabinet

Why is this important?

Preventable, unintentional injuries during childhood are occurring at alarming rates. It is helpful to know areas of opportunity for injury prevention to increase awareness and target education for parents and the community. The Spectrum of Prevention developed by the Prevention Institute is a useful framework for thinking through multi-level strategies for success in preventing unintentional injuries through a synergistic approach.
Selected key resources for the children’s health needs identified in this assessment for our six-county service region are listed below by priority focus area and county/counties served, along with other general health resources. Many additional community resources are available and are accessible through 211 Texas (www.211texas.org) or Tarrant Cares (www.tarrantcares.org).

Cook Children’s Health Care System offers a Medical Center, seven neighborhood clinics to serve low-income families in Tarrant County and 30 primary care or urgent care centers in Tarrant, Denton, Hood, Parker, and Johnson counties. Please see [www.cookchildrens.org](http://www.cookchildrens.org) for specific locations.
Collaboration
Recognizing that children’s health issues are complex and successful strategies require a collaborative effort among a broad range of organizations, we invite individuals and community organizations to join us in our efforts to address the children’s health issues identified in this assessment.

Please consider joining one of the local coalitions led by Cook Children’s or volunteer for one of our community outreach programs that serve families (Healthy Homes, Save a Smile, or Safe Kids North Texas). For more information, please visit our website at www.centerforchildrenshealth.org.

Share Findings
Cook Children’s develops intentional opportunities to share assessment findings with our community. The 2018 Community-wide Children’s Health Assessment and Planning Survey (CCHAPS) findings were first shared at a regional summit in Tarrant County in October 2018. Shortly after, a brief summary was presented to the seven coalitions led by Cook Children’s to provide an update on community needs. Based on coalition feedback, customized presentations based on Access, Healthy Lifestyles, Child Abuse/Neglect, and Mental Health were presented at local community summits in Denton, Johnson, Parker, Wise, and Hood counties in 2019. The participant feedback collected will be referenced for refining future assessments.

Requests for presentations to summarize assessment findings often inform community stakeholders and help persuade organizations and individuals to join these important efforts. Requests may be submitted via email to CCHAPS@cookchildrens.org. Quick-reference summaries of findings (KidBits) are available in the Appendix. The recommended citation for KidBits or this assessment report is provided on the Contents page.

Implementation Strategies
The 2018 CHNA and implementation strategies are posted on the Cook Children’s website at www.cookchildrens.org/about/community-outreach. The findings from this CHNA and feedback from community presentations are scheduled for final review by the Cook Children’s Board of Trustees in 2019, and implementation strategies will be approved and posted for public comment.
The 2018 CHNA findings continue to support the overall priority areas determined following the 2009 CHNA. A summary of progress made since the 2015 CHNA is provided below, and more detailed evaluation results for the 3-year period are provided in the Appendix. Although Cook Children’s core strategies and children’s health priorities have remained consistent over several assessment periods, recommended implementation strategies proposed from the 2018 CHNA may be modified to reflect expanded community partnerships and opportunities for growth.

**CHILD ABUSE AND NEGLECT PREVENTION**

*Center for Prevention of Child Abuse and Neglect*

- Developed and implemented a multi-strategy, two-generational initiative to reduce the impact of ACEs on children prenatal to five years of age and prevent ongoing adversity for families, in order to improve school readiness, safety, and overall child well-being.
- Developed and implemented an _early-detection web-based training_ designed to help medical professionals and first responders more quickly recognize and report suspected cases of child abuse and neglect.
- Developed and maintained a “Survivors Like Us” social media resource to bring together child abuse survivors with a recovery focus.
- Began and continued developing a statistical projection project (PRO-TX) to identify areas at high risk for child abuse and neglect to target community resources.

**WELLNESS**

* Asthma

- Developed and implemented the _Healthy Homes_ program, providing home assessments to help families identify asthma triggers and needs for home hygiene supplies.
- Equipped school nurses with the appropriate tools and _rescue medications_ to quickly respond to a child in respiratory distress.

* Mental Health*

- Continued developing _continuing education workshops_ based on evidence-based practices to mental health professionals.
- Sustained a _community website_ (www.watchdenton.org) to provide information about mental health issues and resources for children, parents, and professionals.
- Sustained an annual a _county-wide art contest_ with numerous community partners to provide a creative outlet for children and teens to express their emotions through art.
- Piloted a _training on screening children and youth for depression and anxiety_ to Cook Children’s physicians and other community psychiatrists.

* Healthy Lifestyles (Obesity Prevention)*

- Continued partnering with schools to present a national evidence-based curriculum (5210) to promote _healthy lifestyles_.
- Continued providing structure and support in partnership with community partners to implement _school gardens_ in elementary schools.

* Parenting Support*

- Sustained _Parent Café_ programs in Hood and Wise counties offering a national evidence-based curriculum facilitated by volunteers to promote healthy parenting practices.
Access
• Continued supporting the **Homeless Initiative** led by Cook Children’s Case Management Department to help families in Tarrant County shelters find a medical home for their children.

**ORAL HEALTH**

**Save a Smile**
• Continued **limited oral health evaluations** in 18 target schools to identify children with severe dental disease.
• Connected children to dental care through **social support services**.
• Volunteer dentists continued providing **free, comprehensive dental treatment** to children with severe dental disease who have limited resources and access to care.
• Provided **school-based oral health education** to elementary school students.
• Hosted **teeth cleaning events** in partnership with Tarrant County College Dental Hygiene Program.

**Children’s Oral Health Coalition**
• Continued creating **oral health kits** for children at Title 1 schools in Tarrant County and surrounding areas.
• Trained community ambassadors to **educate caregivers** about good oral health practices for young children.
• Sustained distribution of **educational materials and awareness messages** supporting oral health.
• Created a pilot program to address **barriers to oral health during pregnancy**.

**INJURY PREVENTION**

**Drowning Prevention**
• Continued leading a **Lifeguard Your Child** campaign, an initiative that supports community partners in practicing evidence-informed strategies and unified messaging. Strategies include creating city-based planning committees, distribution of water watcher tags, connecting families to water safety lessons, community education, and social media. The campaign also offers an online **Water Safety Club** resource for parents and children.

**Child Passenger Safety**
• Continued hosting and recruited new partners for **car seat checks** and education events routinely held in specific locations.
• Implemented a pilot **Booster Seat Initiative** program to focus education and resources for children transitioning from a car seat to a booster seat.
• Provided the **National Child Passenger Safety Technician training** to community members and organizations to expand our region’s capability to teach families how to transport children safely.

**Poison Prevention**
• Trained community ambassadors to provide **parent education about poison prevention** while distributing medication lockboxes and other educational materials and resources.
• Developed a **poison prevention social media toolkit** regarding key poison prevention messages which are accessible from the Cook Children’s website.

**Gun Safety**
• Piloted a research project (under review by IRB) to **help parents understand the importance of gun safety storage**, while distributing gun safes, gun cable locks, and educational materials.

**Safe Baby Sleep**
• Founded a community council to promote **safe baby sleep practices** through uniform hospital policies, community practices, distribution of safe sleep items, and standardized staff training and caregiver education.

APPENDIX A: Parent & Community Leader Survey Instruments
Cook Children’s Community-wide Children’s Health Assessment and Planning Survey [CCHAPS] – Version 1

Please take time to complete this important survey. The results of this survey will be used to improve the quality of children’s health programs and services in the community where you live. If you have questions about the survey please go to www.cookhealthsurvey.com. THANK YOU in advance for your support of this important effort. Your answers will remain confidential.

Do you have any children under age 15 living in your home (this includes children who are not related to you)?
____ (1) Yes – continue _____ (2) No - END THE SURVEY; this survey is intended for households with children under age 15

1. What are the ages of all children under age 15 who are currently living in your home? (Write the age of each child in your household (up to 6) in the spaces provided below; if a child is less than 1 year old, write “0”.)

   Child 1 _____ Child 2 _____ Child 3 _____ Child 4 _____ Child 5 _____ Child 6 _____

The remaining questions on this survey are intended to be about a specific child under age 15. In order for our survey to be representative of all children in the area where you live, we would like you to answer the following questions about the child in your household who is under age 15 and will celebrate their birthday next. If you do not feel comfortable answering one or more questions, just leave the question(s) blank. All of your responses will remain confidential.

2. How old is the child about whom you will be answering the following questions?
   _____ Years (Should be under age 15) _____ Months (if under the age of 1)

3. What is your relationship to this child?
   ____ (1) Father _____ (5) Grandmother _____ (9) Foster parent
   ____ (2) Mother _____ (6) Grandfather _____ (0) Other: ______________
   ____ (3) Step-father _____ (7) Aunt/Uncle
   ____ (4) Step-mother _____ (8) Brother/Sister

4. What is your marital status?
   ____ (1) Single, never married _____ (3) Widowed _____ (5) Separated
   ____ (2) Married or domestic partner _____ (4) Divorced

5. What is the child’s gender? _____ (1) Male _____ (2) Female

6. Is this child Hispanic or Latino? _____ (1) Yes _____ (2) No

7. Which of the following describe this child’s race? (Check all that apply)
   ____ (1) Asian/Pacific Islander _____ (4) Hispanic/Latino
   ____ (2) African American/Black _____ (5) White/Caucasian
   ____ (3) American Indian/Alaskan Native _____ (6) Other: ______________

   PHYSICAL HEALTH

8. In general, how would you describe this child’s health?
   ____ (5) Excellent _____ (4) Very Good _____ (3) Good _____ (2) Fair _____ (1) Poor

9. Approximately, how tall is this child? _______ Ft. _______ Inches

10. Approximately, how much does this child currently weigh? _____________ Pounds

Your responses will remain completely confidential
11. How many days did this child have at least 30 minutes of physical activity during the past 7 days?
   (1) None  (2) One to three days  (3) Four to six days  (4) Seven days

12. Do you think this child eats healthy meals most of the time?  (1) Yes  (2) No  (9) Don't know

Asthma

13. Has a doctor or health professional ever told you that the child you selected in Question #2 has asthma?

<table>

13a. If YES to #13: Does this child currently have asthma?

If YES to #13a, please answer #13a(1-6)

1. Does this child have an individualized asthma action plan?
   (1) Yes  (2) No  (9) Don’t know

2. Does this child have asthma symptoms or take quick relief inhaler more than two times per week?
   (1) Yes  (2) No  (9) Don’t know

3. Does this child awaken at night with asthma symptoms more than two times per month?
   (1) Yes  (2) No  (9) Don’t know

4. Have you refilled this child’s relief inhaler more than two times in the past year?
   (1) Yes  (2) No  (9) Don’t know

5. Is this child able to participate in Physical Education at school or other physical activity?
   (1) Yes  (2) No  (9) Don’t know

6. Has this child been in an emergency room in the past year because of asthma symptoms?
   (1) Yes  (2) No  (9) Don’t know

14. Has this child ever had allergies (e.g. hay fever, any kind of respiratory allergy not asthma, food/digestive allergy, skin rash/skin allergy)?
   (1) Yes  (2) No  (9) Don’t know

15. Are this child’s vaccinations up-to-date for a child of his/her age?  (1) Yes  (2) No  (9) Don’t know

16. Are you concerned that this child may be overweight?  (1) Yes  (2) No  (9) Don’t know

17. Are you concerned that this child may be underweight?  (1) Yes  (2) No  (9) Don’t know

18. How many 8 ounce servings of the following did this child drink yesterday?
   (A) Water: _____ servings  (B) Juice: _____ servings  (C) Soda/pop: _____ servings  (D) Milk: _____ servings

19. Was this child breastfed or did the child receive breast milk?  (1) Yes  (2) No  (9) Don’t know

   19a. IF YES to #19: How long was this child breastfed or receive breast milk?
       (1) Up to 6 weeks  (2) 7 weeks – 6 months  (3) 7-12 months  (4) more than 12 months

   19b. IF YES to #19: How old was this child when he/she was first fed anything other than breast milk?
       ________ months

DENTAL/ORAL HEALTH

20. How much does this child’s dental health affect his/her overall health?
    (1) A lot  (2) Some  (3) Very little  (4) Not at all  (9) Don’t know

21. How important do you think dental check-ups, cleanings, and other preventive dental care services are to the overall health of this child?
    (1) Extremely important  (2) Very important  (3) Important  (4) Not Important  (5) Not important at all
22. Please answer the following questions YES or NO about the child you selected in Question #2. If you are not sure, circle “9”.

<table>

23. Does this child have insurance, Medicaid or CHIP that helps pay for routine dental care including cleanings, X-rays, and examinations?
   ___(1) Yes   ___(2) No   ___(9) Don’t know

24. During the past 12 months, did this child receive all the dental care that he/she needed or should have received?   ___(1) Yes  ___(2) No - answer Q27a  ___(9) Don’t know

24a. [IF NO to #24] Why did this child not get all the dental care that he/she needed? (Check all that apply)
   ___(01) Could not afford   ___(07) Lack of transportation
   ___(02) Not covered by insurance   ___(08) Could not find a dentist who accepts Medicaid
   ___(03) Could not get in to see a dentist   ___(09) Could not find a dentist who accepts CHIP
   ___(04) Did not know where to go   ___(10) Child not old enough
   ___(05) Dental facilities are not available   ___(11) Other: ____________________
   ___(06) Afraid to go to the dentist

25. At what age do you think a child should first visit a dentist?
   ___(1) 1 year   ___(2) 2 years   ___(3) 3 years   ___(4) When permanent teeth come in   ___(9) Don’t know

26. Has this child ever missed school because of dental pain?
   ___(1) Yes: How many days did he/she miss? ________ days
   ___(2) No

**EMOTIONAL/BEHAVIORAL HEALTH**

27. During the past week, how many days did this child play with other children [his/her] age?
   ___(1) Every day   ___(2) Every other day   ___(3) Once a week   ___(4) Once a month   ___(5) Less than once/month

28. Does this child regularly exhibit problematic social behaviors?   ___(1) Yes   ___(2) No

29. Has this child ever been arrested or in trouble with the police?   ___(1) Yes   ___(2) No   ___(9) Don’t know

30. Has this child ever had academic problems at school?   ___(1) Yes   ___(2) No   ___(9) Don’t know

31. Has this child ever had behavior problems at school?   ___(1) Yes   ___(2) No   ___(9) Don’t know

32. Has this child ever been suspended from daycare, school, or a program of activities due to “reported” behavioral problems?
   ___(1) Yes   ___(2) No   ___(9) Don’t know

33. Has this child ever been bullied or teased a lot at school?   ___(1) Yes   ___(2) No   ___(9) Don’t know
34. Has this child ever bullied other children? ____ (1) Yes  ____ (2) No  ____ (9) Don’t know

35. Has this child ever been a victim of cyberbullying, sexting, or online child abuse?  
   ____ (1) Yes  ____ (2) No  ____ (9) Don’t know

36. Has this child ever attempted suicide? ____ (1) Yes  ____ (2) No  ____ (9) Don’t know

37. Have you ever been told by a doctor or healthcare professional that this child has a mental illness or disorder?  
   ____ (1) Yes – answer Q39a  ____ (2) No  ____ (9) Don’t know

37a. IF YES to #37: Which of following illnesses were you told that this child has (or used to have)?  
   (Check all that apply)
   ___ (01) ADD or ADHD (Attention Deficit Disorder or Attention Deficit Hyperactive Disorder)  
   ___ (02) Anxiety problems including Obsessive-Compulsive Disorder  
   ___ (03) Autism Spectrum Disorders (Autism, Asperger’s Syndrome, etc.)  
   ___ (04) Severe Behavior Problems/Disruptive Behavior problems  
   ___ (05) Eating Disorder (such as anorexia, bulimia, binge or night eating syndrome).  
   ___ (06) Learning Disorder  
   ___ (07) Depression  
   ___ (08) Mood Disorder  
   ___ (09) Post-traumatic stress disorder  
   ___ (10) Adjustment disorder  
   ___ (11) Other: ___________________________

38. Has this child ever needed mental healthcare but not received it?  
   ____ (1) Yes – answer Q41a  ____ (2) No  ____ (9) Don’t know

38a. IF YES to #38: Why did this child not get all the mental healthcare that he/she needed?  
   (Check all that apply)
   ___ (01) Could not afford  
   ___ (02) Not covered by insurance  
   ___ (03) Could not get in to see a doctor/healthcare professional  
   ___ (04) Did not know where to get help  
   ___ (05) Mental health facilities are not available  
   ___ (06) Child is afraid to go to a mental health professional  
   ___ (07) Did not want others to know about the child’s problem  
   ___ (08) Afraid that services might not be confidential or that providers might report you to other agencies  
   ___ (09) You or another caregiver did not think the child really needed help at the time  
   ___ (10) You or others did not think anything could be done to help the child  
   ___ (11) Lack of transportation  
   ___ (12) Could not find a mental health professional who accepts Medicaid/CHIP  
   ___ (13) Inability to access during convenient (i.e. evening or weekend hours  
   ___ (14) Unacceptably long waiting list  
   ___ (15) Other: ___________________________

- (06) $50,000-$59,999
- (07) $60,000-$69,999
- (08) $70,000-$79,999
- (09) $80,000-$89,999
- (10) $90,000-$99,999
- (11) $100,000 or more
- (99) Prefer not to disclose

**THANK YOU. THIS CONCLUDES THE SURVEY.**

*Please return your survey in the postage-paid envelope addressed to ETC Institute, 725 W Frontier, Olathe KS 66061*

The address information on the label to the right will only be used to identify needs in different areas of the county where you live. If the information is not correct, please provide the correct information. If you do not want us to record your address, please leave the county name, the city and the zip code visible.

*Your responses will remain completely confidential*
Cook Children’s Community-wide Children’s Health Assessment and Planning Survey [CCHAPS] – Version 2

Please take time to complete this important survey. The results of this survey will be used to improve the quality of children’s health programs and services in the community where you live. If you have questions about the survey please go to www.cookhealthsurvey.com. THANK YOU in advance for your support of this important effort. Your answers will remain confidential.

Do you have any children under age 15 living in your home (this includes children who are not related to you)?

(1) Yes – continue  (2) No - END THE SURVEY; this survey is intended for households with children under age 15

1. What are the ages of all children under age 15 who are currently living in your home? (Write the age of each child in your household (up to 6) in the spaces provided below; if a child is less than 1 year old, write “0”.)

Child 1 _____  Child 2 _____  Child 3 _____  Child 4 _____  Child 5 _____  Child 6 _____

The remaining questions on this survey are intended to be about a specific child under age 15. In order for our survey to be representative of all children in the area where you live, we would like you to answer the following questions about the child in your household who is under age 15 and will celebrate their birthday next.

If you do not feel comfortable answering one or more questions, just leave the question(s) blank. All of your responses will remain confidential.

2. How old is the child about whom you will be answering the following questions?

_____ Years (Should be under age 15)  _____ Months (if under the age of 1)

3. What is your relationship to this child?

(1) Father  (2) Mother  (3) Step-father  (4) Step-mother

(5) Grandmother  (6) Grandfather  (7) Aunt/Uncle  (8) Brother/Sister

(9) Foster parent  (0) Other: ______________

4. What is your marital status?

(1) Single, never married  (2) Married or domestic partner  (3) Widowed  (4) Divorced

(5) Separated  (6) Widowed  (7) Single

5. What is this child’s gender?  (1) Male  (2) Female

6. Is this child Hispanic or Latino?  (1) Yes  (2) No

7. Which of the following describe this child’s race? (Check all that apply)

(1) Asian/Pacific Islander  (2) African American/Black

(3) American Indian/Alaskan Native  (4) White/Caucasian  (5) Other: ______________

PHYSICAL HEALTH

8. In general, how would you describe this child’s health?

(1) Poor  (2) Fair  (3) Good  (4) Very Good  (5) Excellent

9. Approximately, how tall is this child?  ______ Ft.  ______ Inches

10. Approximately, how much does this child currently weigh?  _____________ Pounds

Your responses will remain completely confidential
11. How many days did this child have at least 30 minutes of physical activity during the past 7 days?
   ____1) None  ____2) One to three days  ____3) Four to six days  ____4) Seven days

12. Do you think this child eats healthy meals most of the time?  ____1) Yes  ____2) No  ____9) Don't know

</tbody>
</table>

69. Overall, how well informed do you think you are about health issues that affect this child?

___(1) very well informed  ___(3) somewhat well informed  ___(5) not well informed at all
___(2) well informed  ___(4) not well informed

70. Please indicate if you have a need for any of the following and do NOT have access to them. If you have access or you do not have a need, please leave the item blank. (check all that apply).

___(1) Parenting classes  ___(4) Nutritional resources (WIC, SNAP, etc.)
___(2) Early learning opportunities (pre-school, Headstart, etc.)  ___(5) Housing
___(3) Transportation

DEMOGRAPHICS AND NEIGHBORHOOD CHARACTERISTICS

71. How many children under age 18 currently live in your household? _______ Children

72. How many adults age 18 and older currently live in your household? _______ Adults

73. Are there grocery stores in your neighborhood that have fresh fruit and vegetables?  ___(1) Yes  ___(2) No

74. Are there safe parks/outdoor areas for this child to play in the neighborhood where you live?  ___(1) Yes  ___(2) No

75. What is the primary language spoken in your household?  ___(1) Spanish  ___(2) English  ___(3) Other _______

76. Did you participate in any of the previous health assessment surveys sponsored by Cook Children’s? (check all that apply)  ___(1) 2009  ___(2) 2012  ___(2) 2015

77. How many years have you lived in community where you currently live? _______ years

78. What is the highest level of education you have completed?

___(1) Less than high school graduate  ___(4) 2-Year college/Technical certification program
___(2) High school graduate  ___(5) 4-Year college degree
___(3) Some college  ___(6) more than 4 years of college

79. What is your total annual household income?

___(01) Less than $14,000  ___(05) $35,000-$49,999  ___(09) $80,000-$89,999
___(02) $14,000-$20,999  ___(06) $50,000-$59,999  ___(10) $90,000-$99,999
___(03) $21,000-$27,999  ___(07) $60,000-$69,999  ___(11) $100,000 or more
___(04) $28,000-$34,999  ___(08) $70,000-$79,999  ___(99) Prefer not to disclose

THANK YOU. THIS CONCLUDES THE SURVEY.
Please return your survey in the postage-paid envelope addressed to
ETC Institute, 725 W Frontier, Olathe KS 66061

The address information on the label to the right will only be used to identify needs in different areas of the county where you live. If the information is not correct, please provide the correct information. If you do not want us to record your address, please leave the county name, the city and the zip code visible.

Your responses will remain completely confidential
Cook Children's 2018 Community Leader Survey

Please help us identify key children's health issues in our community by taking this survey as part of the Community-wide Children's Health and Planning Survey (CCHAPS). If you have questions about CCHAPS please call our Message Center at 682-885-6590, or send an email to CCHAPS@cookchildrens.org. This survey may be completed online at CookLeaderSurvey.org. Thank you for your support of this important effort. Your answers will remain confidential.

1. **Overall, how well informed do you believe you are about children's health issues in the county where you live?**
   
   ____ (1) Very well informed  ____ (3) Somewhat well informed  ____ (5) Not well informed at all
   
   ____ (2) Well informed  ____ (4) Not well informed

   *Even if you don't feel well-informed, please take time to answer the following questions to the best of your ability.*

2. **Please rate your level of agreement with the following statements about children's health issues in the county where you live. If you do not know enough about the issue to have an opinion, circle "9."**

General Health & Access

8 in 10 children (ages 0-14) in CCHAPS Region had ‘excellent’ or ‘very good’ health, according to their parents

96% of children had a Primary Care Provider

68% had very easy access to immunizations

Nearly 72,000 were uninsured at some point during the year

Nearly 94,000 have specialized healthcare needs

School Age Children (5-14)

17% had academic problems

14% had behavioral problems at school

More than half of parents talked daily about child’s friends/interests/problems

1 in 5 have been bullied or teased at school

81% of parents said child eats healthy meals most of the time

65% had 5 or more family meals together in the last week

Parents of Young Children (0-5)

65% of parents are coping very well with parenthood

A third of children had dental problems (toothache, decayed teeth, cavities, etc)

1 in 7 children did not receive all necessary dental care

88% of parents have day-to-day emotional help & support with parenting

8% of parents didn’t know if child was buckled up properly

70% lock up medications

73% lock up cleaning products

Mental Health

11% of children (ages 5-15) diagnosed with mental illness/disorder

14% of children (ages 0-15) received assistance for mental illness/behavioral/emotional/developmental problem

2% of children (ages 5-15) needed mental health but didn’t receive it

25% had very easy access to mental health

Half of parents are not familiar with mental health services in their community

Report prepared by Child Health Evaluation in Cook Children’s Center for Children’s Health, March 2019. CCHAPS is a triennial survey, administered to parents of children (ages 0-14) in the CCHAPS Region (Tarrant, Denton, Johnson, Parker, Hood, Wise Counties) to provide a representative assessment of parent perception and health characteristics of children. Findings are representative of CCHAPS Region children ages 0-14 (US Census Bureau 2010 Population: 720,425). For more information about this report or other counties’ findings, contact Blair Murphy at blair.murphy@cookchildrens.org or visit centerforchildrenshealth.org.
General Health & Access

- **9 in 10** children (ages 0-14) in Tarrant County had ‘excellent’ or ‘very good’ health, according to their parents.

**General Health & Access**

- **9 in 10** children (ages 0-14) in Johnson County had 'excellent' or 'very good' health, according to their parents.
- **95%** of children had a Primary Care Provider.
- **60%** had very easy access to immunizations.
- Nearly **2,800** were uninsured at some point during the year.
- Nearly **3,900** have specialized healthcare needs.

**School Age Children (5-14)**

- **77%** had 4 or more days of physical activity in the last week.
- **58%** had 2 or more daily servings of fruits.
- **61%** had 2 or more daily servings of vegetables.
- **54%** watched TV for 1 or more hours.
- **40%** played video games for 1 or more hours.
- **78%** of parents said their child eats healthy meals most of the time.
- **68%** had 5 or more family meals together in the last week.

**Community**

- **80%** have neighborhood grocery stores with fresh fruits/vegetables.
- **87%** have safe parks and outdoors areas for children to play.

**Mental Health**

- **11%** of children (ages 5-15) diagnosed with mental illness or disorder.
- **16%** of children (ages 0-15) received assistance for mental illness, behavioral, emotional, or developmental problem.

**Parents of Young Children (0-5)**

- **76%** of parents are coping very well with parenthood.
- **17%** of parents didn't know if child was buckled up properly.
- **96%** of parents have day-to-day emotional help & support with parenting.
- **60%** of parents lock up medications.

---

Report prepared by Child Health Evaluation in Cook Children’s Center for Children’s Health, March 2019. CCHAPS is a triennial survey, administered to parents of children (ages 0-14) in the CCHAPS Region (Tarrant, Denton, Johnson, Parker, Hood, Wise Counties) to provide a representative assessment of parent perception and health characteristics of children. Findings are representative of Johnson County children ages 0-14 (US Census Bureau 2010 Population: 35,160). For more information about this report or other counties’ findings, contact Blair Murphy at blair.murphy@cookchildrens.org or visit centerforchildrenshealth.org.
81% had 4 or more days of physical activity in the last week
65% watched TV for 1 or more hours
29% played video games for 1 or more hours
58% had 2 or more daily servings of fruits
64% had 2 or more daily servings of vegetables
82% of parents said their child eats healthy meals most of the time
66% had 5 or more family meals together in the last week
13% of parents are concerned their child is overweight
81% had 4 or more days of physical activity in the last week
65% watched TV for 1 or more hours
29% played video games for 1 or more hours
58% had 2 or more daily servings of fruits
64% had 2 or more daily servings of vegetables
82% of parents said their child eats healthy meals most of the time
66% had 5 or more family meals together in the last week
13% of parents are concerned their child is overweight

80% have neighborhood grocery stores with fresh fruits/vegetables
88% have safe parks and outdoors areas for children to play
10% of children (ages 5-15) diagnosed with mental illness or disorder
15% of children (ages 0-15) received assistance for mental illness, behavioral, emotional, or developmental problem

Report prepared by Child Health Evaluation in Cook Children’s Center for Children’s Health, March 2019. CCHAPS is a triennial survey, administered to parents of children (ages 0-14) in the CCHAPS Region (Tarrant, Denton, Johnson, Parker, Hood, Wise Counties) to provide a representative assessment of parent perception and health characteristics of children. Findings are representative of Parker County children ages 0-14 (US Census Bureau 2010 Population: 25,656). For more information about this report or other counties’ findings, contact Blair Murphy at blair.murphy@cookchildrens.org or visit centerforchildrenshealth.org.
General Health & Access

- 8 in 10 children (ages 0-14) in Wise County had ‘excellent’ or ‘very good’ health, according to their parents.
- 85% of children had a Primary Care Provider.
- 61% had very easy access to immunizations.
- Nearly 2,700 were uninsured at some point during the year.
- Nearly 1,500 have specialized healthcare needs.

School Age Children (5-14)

- 24% had academic problems.
- 14% had behavioral problems at school.
- More than half of parents talked daily about child’s friends/interests/problems.
- 1 in 6 have been bullied or teased at school.
- 1 in 5 have problems with self-esteem.
- 83% of parents said child eats healthy meals most of the time.
- 64% had 5 or more family meals together in the last week.

Parents of Young Children (0-5)

- 85% of parents are coping very well with parenthood.
- 74% of parents have day-to-day emotional help & support with parenting.
- 19% of parents didn’t know if child was buckled up properly.
- 52% lock up medications.
- 52% lock up cleaning products.

Mental Health

- 8% of children (ages 5-15) diagnosed with mental illness or disorder.
- 16% of children (ages 0-15) received assistance for mental illness, behavioral, emotional, or developmental problem.
- Half of parents are not familiar with mental health services in their community.

Barriers to Care:
- Could not afford
- Not covered by insurance
- Didn’t want others to know
- Fear of reporting to agencies
- Didn’t know where to go
- Long wait list/delay
- Provider didn’t accept Medicaid

Report prepared by Child Health Evaluation in Cook Children’s Center for Children’s Health, March 2019. ### Goal 9: Increase access to pediatric medical care and services

<table>
<thead>
<tr>
<th>Strategy</th>
<th>Units of Measure</th>
<th>10/1/15 - 9/30/18 (Unless otherwise noted)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increase points of access to pediatric medical care and services by building neighborhood clinics as pediatric medical homes in underserved areas.</td>
<td># of NHCs</td>
<td>7 (Total at end of FY18)</td>
</tr>
<tr>
<td></td>
<td># of NHC visits</td>
<td>336,229</td>
</tr>
<tr>
<td>Increase convenience of access to pediatric medical care and services by building pediatric urgent care centers in convenient locations.</td>
<td># of UCCs</td>
<td>5 (Total at end of FY18)</td>
</tr>
<tr>
<td></td>
<td># of UCC visits</td>
<td>374,436</td>
</tr>
<tr>
<td>Sustain the Homeless Initiative which provides primary care services to children of families in temporary shelters and work to sustain those services as their medical home after leaving the shelter.</td>
<td># of children enrolled</td>
<td>1,633 (Program initiation in 2008 through FY18)</td>
</tr>
<tr>
<td></td>
<td>% of children returning</td>
<td>45% (Program initiation in 2008 through FY18)</td>
</tr>
<tr>
<td>Sustain and grow Cook Children’s Health Plan, a provider-based MCO, as a way to assure financial issues are not barriers to access for eligible families.</td>
<td># of “covered lives”</td>
<td>141,103 (As of FY18 end)</td>
</tr>
<tr>
<td>Successfully implement STARKids contract, demonstrating compliance with State performance measures (e.g., timely conduct of assessments and interval contacts, prompt response to member concerns, accurate reporting of encounter information).</td>
<td># of additional &quot;covered lives&quot;</td>
<td>9,292 (Total at end of FY18)</td>
</tr>
